

CLAIMS

1. An anaerobically curable composition comprising:
 - (a) a polymerizable monomer having a functional group represented by the general formula: $\text{H}_2\text{C}=\text{C}(\text{R})-$ (wherein R is a hydrogen atom or a methyl group) at a terminal of its molecule;
 - (b) an organic peroxide;
 - (c) o-benzoic sulfimide; and
 - (d) a salt selected from the group consisting of sodium salts, potassium salts and calcium salts of weakly acidic substances.
2. The anaerobically curable composition of claim 1, wherein ingredient (a) comprises a hydroxyl-containing (meth)acrylate.
3. The anaerobically curable composition of claim 2, which is obtained by mixing ingredient (d) with the hydroxyl-containing (meth)acrylate to obtain compatibility and then mixing the resultant with the other ingredients.
4. The anaerobically curable composition of claim 1, wherein the weakly acidic substance is selected from the group consisting of carbonic acid, boric acid, phosphoric acid, nitrous acid, hypochlorous acid, formic acid, acetic acid, propionic acid, caproic acid, lauric acid, myristic acid, palmitic acid, oleic acid, stearic acid, citric acid,
